Every morning for the past year+ between the hours of roughly 7am-10 am and in early evening hours my neighborhood has overwhelming smell of methane gas. The belief is this odor is off gassing from the Chrin landfill. This has been a noticeable problem for the past year or so at least. I have acute asthma and suffer lung irritation and burning as a result of this when exercising or working outside during periods when the odor is level is high. I fear a toxic situation exists.

I live in the Morgan Hill area of Easton, PA, and every morning, there is an unpleasant smell surrounding the area that comes from the nearby landfill. Not only is the scent horrible, but I am worried about the environmental risks it may pose.

VERY strong landfill gas odor at 4:50 PM today in my driveway. Get done with work to enjoy a nice walk and have to smell the Chrin smell, it was present for my entire walk and still in my driveway at 5:25 PM, when will the DEP stop this odor producing landfill? Can't even enjoy a nice fall day at my home.

When I came out of my garageto walk my dog, I can smell the CHRIN landfill odor today. I haven't been home a lot lately but I don't know what the problem is. It seems like every time I go outside to walk the dog, I smell the dump so not sure how we're going to get control of this as it's getting closer to the house.
